# Eurex Trade Entry Services offer you trading anonymity with safety

- **Block Trade facility**

- The Eurex TES facility enables you to execute and clear bilateral trades in SSFs. Capped trading fees and a minimum Block Trade size of one contract significantly reduces your trading costs.

- **Non-disclosure facility**

- Block Trades in SSFs which exceed a 1,000 lots are not disclosed intra-day in the relevant Eurex GUI window.
- The trade volume can be viewed in the report or in the Eurex Trading GUI Window (“Market Information > Online Time and Sales Sheet”) on the following exchange date.

# Eurex Trade Entry Services offer you trading anonymity with safety

- **Bulk load panel**

- The bulk load panel within the Block Trade facility further enhances the trading efficiency. This functionality enables the import of multiple Block Trades in futures directly from a file in csv format into the Eurex system.

- **Flexible Futures**

- Eurex TES Flexible Futures enable you to define the following parameters:
  - **Maturity:** You can choose any exchange day between the first trading day after the trade date and the last standard maturity date of the affected futures contract.
  - **Settlement type:** In addition to cash settlement, you can choose physical delivery for SSFs on Austrian, Belgian, Dutch, Finnish, French, German, Italian, Spanish and Swiss equities.
- All trades executed via the Flexible Futures facility are not disclosed.

# SSFs provide you with various trading opportunities

## Hedging

You can protect your portfolio against adverse market moves by selling or buying SSFs rather than equities.

## Leverage

Use a much smaller capital outlay to achieve the same amount of exposure.

## Pairs trading

You know there is a positive correlation in the daily price movement between two stocks. When a negative correlation occurs you go short on the outperforming stock and long on the underperforming one, betting that the "spread" between the two would eventually converge.

## 130/30 Strategy

A 130/30 ratio implies shorting stocks up to 30 percent of the portfolio value and then using the funds to take a long position in the stocks you feel that will outperform the market.

## Cash equitisation

A fund manager knows he will receive EUR 50 million to invest in European equities in the near future and is concerned that the market will be higher by the time he receives the cash. Therefore he buys SSFs to forward fix the cost.
