### **Procedure**

#### **1. Determination of Adjustment Factor (R-Factor)**

The official closing auction price of the Lloyds TSB Group PLC share at the London Stock Exchange on December 12, 2008 will be the basis for determination of the R-factor.

The R-factor will be determined with eight decimal places. It is calculated in the following way:

$$R = ((\text{number of existing shares} / \text{number of new shares}) * (1 - (\text{issue price of new shares} / \text{closing auction price}))) + (\text{issue price of new shares} / \text{closing auction price})$$

$$R = ((1 / 1.4347) * (1 - (173.30 / \text{closing auction price}))) + (173.30 / \text{closing auction price})$$

#### **2. Adjustment of Contract Size and Variation Margin**

To adjust the calculation of the Variation Margin of the following day, settlement prices of the last cum trading day will be multiplied by the R-factor.

The new contract size will be calculated as follows:

$$\text{Contract size new} = \text{contract size old} / R\text{-factor}$$

All outstanding orders and quotes will be deleted after close of trading on the last cum trading day.

**3. Introduction of a new Contract**

If an adjustment will take place, a new stock future with standard contract size 1000 and product code LOFG will be introduced.

The exact date of introduction will be announced via the **Market Supervision Messages** window.

As soon as there is no more open interest in the stock futures contract LLOF, trading in this contract will be set on "HALT" and discontinued.
