# Continued Success for European Stock Options at Eurex: New Records for Open Interest

Eurex continues to strengthen its position as the largest and most liquid market for European stock options, posting new open interest records in both its Dutch and French stock options segment. Currently, options on 44 of the 50 Dow Jones EURO STOXX<sup>SM</sup> 50 Index constituents are available for trading at Eurex.

On October 8, 2004, open interest in Dutch stock options reached an all-time high by exceeding three million contracts for the first time; this corresponds to a share of twelve percent of the overall open interest in exchange-traded Dutch stock options. The rise in open interest follows record trading levels in Dutch options contracts on September 29. On this day, Eurex attained a market share of 39 percent for the first time ever. On the same day, the options contracts traded at Eurex on the various Dutch component issues of the Dow Jones EURO STOXX 50<sup>SM</sup> Index even reached an overall market share of 62 percent. Trading volume in the entire Dutch stock segment in September accounted for a market share of 19 percent.

Overall, Eurex trading volumes in the Dutch stock options segment have developed strongly during the last few months: In the first three quarters of 2004, a total of 6.4 million options contracts on Dutch underlying instruments changed hands, up by 25 percent compared to the same period of last year.

With a total of 2.1 million options contracts traded on French underlying stocks, volumes in the French stock options segment more than doubled in the first three quarters over the same period of last year. Open interest as per October 8, 2004, exceeded 550,000 contracts – exceeding ten percent of all open positions in exchange-traded French stock options for the first time. In March 2003, when the French segment was launched at Eurex, this share amounted to a mere two percent. A particularly strong increase in open interest was registered for French and Dutch issues that are included in the pan-European Dow Jones EURO STOXX<sup>SM</sup> 50 benchmark index.

## EQUITY DERIVATIVES

### Longer Lifetimes for German Stock Options

With effect from October 18, 2004, Eurex has extended the lifetimes for options on four German stocks from previously 24 to a maximum of 60 months. The change affects options contracts on the shares of BASF AG, E.ON AG, Münchener Rückversicherung AG (Munich Re), and RWE AG.

With the recent extension, Eurex continues to respond to the growing demand from market participants for stock options products with longer lifetimes. Eurex now offers contracts with lifetimes of up to 60 months for all German stock options based on component issues of the Dow Jones EURO STOXX 50<sup>SM</sup> Index.

By continuously adapting and expanding its range of services and products, Eurex underscores its position as the world's leading service provider for exchange-traded derivatives, and as the largest and most liquid market for European stock options.

## EQUITY INDEX DERIVATIVES

# Sector-Based Strategies: Efficient Tools for Diversification and Risk Management

**A few years ago, cross-border investments were the traditional strategy applied to mitigate portfolio risk by way of diversification. Nowadays, sector derivatives have become at least just as important, adding value for tactical asset allocation.**

For quite some time, equity asset allocation was primarily focused on individual countries. For instance, fund managers chose to invest in the U.S., underweighting Germany, or vice versa, often making the decision based on factors such as the macro-economic outlook or political climate. In the late nineties, events which – ten years earlier – could well have triggered a more or less pronounced market reaction, such as a change of government or disappointing economic figures, were simply shrugged off. This led to fundamental changes in investment styles.

The introduction of the euro in 1999, which further increased the freedom of capital flows, was a catalyst for this process. Back in the 1970s, some European equity markets were still negatively correlated with each other. Given the marked reduction in this effect, new diversification tools became necessary.

### **New Ways to Diversify**

Sector derivatives are an excellent tool to achieve the degree of diversification sought after by many fund managers. In contrast to the traditional approach of constructing a portfolio by buying stocks from a certain industry, sector derivatives can be used to build or reduce exposure to a given sector much faster – at lower transaction cost and execution risk. Efficiently managing the portfolio weighting in a specific sector is not the only benefit of sector derivatives. Because they are specifically designed to capture the risk characteristics of a specific market segment through the grouping together of companies with similar primary revenue sources, they also help facilitate more efficient portfolio and risk management.

### **How Sector Derivatives Work**

The following basic examples are designed to explain the easy application of sector derivatives. Let us assume an investor holds a basket of stocks belonging to one specific sector, such as telecommunications. Although the investor is temporarily bearish for this sector, he does not want to liquidate the portfolio holding entirely. Sector derivatives offer the solution: Using sector futures, the investor may hedge either the entire portfolio or just a portion, while options allow to lock-in the value above or within a certain range.

As another example, an investment manager may take the view that a certain stock within a sector is about to outperform its peer group in the short term. Sector futures are the perfect tool for risk management and hedging strategies. Using Nokia as an example, the manager could, instead of tying up his capital by buying the underlying cash stock, purchase a Nokia call option on Eurex. To maintain the overall benchmark weighting of the portfolio, he would need to either sell futures on the Dow Jones STOXX<sup>SM</sup> 600 Telecommunication (FSTT) sector or buy a put option (OSTT) on the same index. If the portfolio is restricted to European telecommunications issues, Dow Jones EURO STOXX<sup>SM</sup> Telecommunications Index Futures (FEST) or Options (OEST) would need to be used.

### **Sector Derivatives and Overlay Strategies**

The previous example clearly illustrates the role that sector derivatives can play in so-called “overlay strategies”, where the risk/return characteristics of an underlying portfolio are modified using derivatives. Let us consider another example: A fund manager who has a EUR 50 million portfolio benchmarked against the Dow Jones EURO STOXX<sup>SM</sup> 50 Index is bearish on the overall market. His view is that the pace of economic growth is about to slow significantly, with a resulting drag on technology investment and spending. He decides to establish a sector overlay that will reduce his exposure to this market segment from its current 8.78 percent portfolio weighting to just three percent. At the same time, he chooses to increase his exposure to Food & Beverage, which he considers safer in the current environment. He thus decides to boost the sector weighting in his portfolio from 4.5 percent to 10.08 percent.

To do this, the fund manager needs to sell Dow Jones EURO STOXX<sup>SM</sup> Technology Index Futures (FESY) with a notional value of EUR 2.89 million and to buy Dow Jones EURO STOXX<sup>SM</sup> Food & Beverage Index Futures (FESO) worth the same amount. Therefore, he sells 174 Technology futures (EUR 2.89 million/contract value of EUR 16,600) and buys 298 Food & Beverage futures (EUR 2.89 million/contract value of EUR 9,700). The overlay strategy, involving trades worth EUR 5.78 million and covering 36 different stocks, has only required two transactions at Eurex. The portfolio now reflects the manager's sector views. If the fund manager's view on technology is so bearish that he actually decides to go short of the sector, Eurex's liquid derivatives are perfectly suited for the purpose. In addition to the benefits shown already, they also remove issues such as stock borrowing from the equation.

In conclusion, sector derivatives enable the fund manager to adjust his portfolio to match his current sector views swiftly, efficiently and with less execution risk than if he had only access to the underlying cash instruments. Using futures has given him the option of further fine-tuning his views by selling or buying the individual constituents of the sectors.

The range of sector futures and options traded at Eurex are ideal index replication tools. As liquidity builds further, the potential for cash-and-carry arbitrage strategies between either the underlying stocks or other sector products, such as exchange-traded funds, will certainly grow.

## Fee Holiday for Dow Jones Italy Titans 30<sup>SM</sup> Index Futures

Eurex is extending its fee holiday for trading in futures on the Dow Jones Italy Titans 30<sup>SM</sup> Index until the end of this year. The fee holiday had originally been scheduled for the period from September 1 to September 17.

"Italy is an important growth market for Eurex", said Rudolf Ferscha, Eurex CEO: "We want to acquire new target customer groups in Italy, both for our new Italian products and for our range of global benchmark products."

The high level of interest in Italian derivatives is reflected in the rising number of Eurex market makers, including Italian as well as international institutions. The following member firms are currently active as market makers:

<b>Designated Market Makers in the Dow Jones Italy Titans 30<sup>SM</sup> Index Futures</b>		
Timber Hill (Europe) AG	Alain Perregeaux	+41-41-7 26-95 94
Banca IMI	Paolo Guilianini	+39-02-77 51-53 02
HypoVereinsbank	Martin Velten	+49-89-37 81-83 16
BNP PARIBAS	Guillaume Pietruschi	+33-1-40 22-89 67
<b>Permanent Market Makers in the Dow Jones Italy Titans 30<sup>SM</sup> Index Options</b>		
Timber Hill (Europe) AG	Alain Perregeaux	+41-41-7 26-95 94
<b>Permanent Market Makers in Italian Stock Options</b>		
Timber Hill (Europe) AG	Alain Perregeaux	+41-41-7 26-95 94
Banca Akros	Alberto Poretti	+39-02-43 44-54 57
CABOTO	Massimo Vitali	+39-02-80 21-57 71

The volume of futures and options traded on Italian stocks and indexes almost tripled year-on-year during the first nine months of the year. Traded volumes in the Italian segment totaled 132,000 contracts from January to September 2004, up from just 48,000 contracts during the same period in 2003.

Further information, such as detailed contract specifications, vendor product codes, index composition data or an index guideline, is available from our website, at [www.eurexchange.com](http://www.eurexchange.com) > **Products**. ## Clearing Services for Eurex Bonds and Eurex Repo to Migrate to CCP Platform

Eurex Clearing AG will transfer all clearing services for Eurex Bonds and Eurex Repo to its central counterparty (CCP) platform next year. The transition – scheduled for the first quarter of 2005 – will coincide with the launch of the new software version CCP Release 3.0. The migration will contribute significantly to the harmonization of the clearing and settlement processes for stocks and fixed income products.

At present, all transactions concluded on Eurex, Eurex Bonds or Eurex Repo are settled via the Integrated Clearer (IC) infrastructure, with Eurex Clearing AG assuming the function of central counterparty, entering into the relationship between the two parties to each trade. The benefits to market participants are obvious: reduced counterparty risk, post-trade anonymity and the advantages of a central risk management process.

With the introduction of CCP Release 3.0, Eurex Clearing AG will extend the scope of the CCP platform to also cover the fixed income markets. In line with the various CCP functions already available for equities, Eurex Bonds and Eurex Repo participants will thus be able to benefit from a range of additional delivery management and netting facilities. For equity trading on both Xetra® and the floor of the Frankfurt Stock Exchange (FWB), CCP was already introduced on March 27, 2003.

With the forthcoming transition, Eurex Clearing AG will be harmonizing the various processes and established infrastructure for the stock market on the one hand and the market for fixed income products on the other hand. With the migration to CCP Release 3.0 in 2005, Eurex Bonds and Eurex Repo participants will also gain access to the Gross Delivery Management functionality, which allows for the entry of settlement instructions on an individual trade level. Above all, however, the transition to the CCP platform will allow participants to use settlement/CSD netting. Within this framework, trades are automatically netted against each other, provided that the respective participant has released them for this purpose. The number of delivery instructions would thus be reduced. With the subsequent netting of positions that are due for delivery, performed by the respective central depositories involved, the number of cross-border deliveries is also reduced to a minimum.

## Euro GC Pooling® Starts in March 2005

Eurex Repo has announced the launch of its new product, Euro GC Pooling® for March 2005. Euro GC Pooling® offers short term collateralized funding and collateral management. With the new product, Eurex Repo, together with Eurex Clearing AG, and Clearstream Banking AG, offers cash-driven, international trading of a general collateral basket with over 9,000 ECB eligible securities. With Euro GC Pooling®, Eurex Repo will raise efficiency in the trading and collateral management of secured money market transactions, and help participants optimize in terms of collateral management.

Euro GC Pooling® is a fully-integrated trading, clearing, settlement and collateral process, executing secured liquidity management with same-day payment and delivery (OverNight), for the first time on the repo market. Moreover, a new type of Euro GC Pooling® contract, tailored to the specific settlement terms for the weekly open market tenders of the European Central Bank, will provide efficient management of collaterals and liquidity.

## Latest News:

# Eurex and CCorp to Immediately Roll Out Phase I of the Global Clearing Link

The Clearing Corporation (CCorp) and Eurex Clearing AG announced on Wednesday, October 27 they will immediately roll out Phase I of their Global Clearing Link. The Global Clearing Link is the first transatlantic clearing link to go live. It will significantly increase the efficiency of global derivatives markets. It will facilitate low cost clearing access to Eurex from the U.S. and will substantially reduce costs through margin offsets and collateral pooling between USD- and EUR-denominated products. The Global Clearing Link provides the U.S. clearing community with direct access to European trading, bringing new business opportunities to the U.S.

The Global Clearing Link builds on Eurex's remote clearing concept, first introduced in 2000. Phase I of the Link extends Eurex's immediate distribution to the U.S. by leveraging CCorp's existing network of clearing participants. The number of clearing partners eligible to be connected to the network will increase by 66 percent. "With the Global Clearing Link we are connecting the U.S. and European derivative markets and offering clearing choice for the first time. The partnership with CCorp allows us to immediately leverage connectivity to the U.S. clearing community to the benefit of our mutual customers", said Rudolf Ferscha, CEO of Eurex. "This substantially reduces costs of access to Eurex from the U.S. and increases clearing flexibility".

Dennis Dutterer, President and CEO of The Clearing Corporation, commented "The benefits of Phase I of the Global Clearing Link are consistent with CCorp's long-standing model of offering clearing services on a cost competitive basis to clearing participants. The link enables us to extend our business model internationally, thereby expanding client access and increasing market efficiency". The first phase of the Global Clearing Link brings immediate benefits to customers: cost reductions through lower clearing fees and higher capital efficiencies, as well as clearing access to European trading within the U.S. regulatory framework. The Global Clearing Link will result in the lowest transatlantic clearing fees, bringing the cost for small and midsize participants down to the level of wholesale pricing. It allows more efficient use of capital through portfolio margining and the use of one common collateral pool for EUR and USD products. New products to be introduced on Eurex US will benefit from immediate offset against the European benchmark range.

Phase I of the Global Clearing Link enables CCorp clearing participants to consolidate in a single clearing account at CCorp their U.S. positions traded on Eurex US and their positions in certain European benchmark derivatives traded at Eurex. CCorp clearing participants will also be able to benefit from portfolio margining between EUR and USD products and one common collateral pool, greatly reducing costs. A further important feature of the Global Clearing Link is that traders clearing European products through CCorp clearing participants will be able to keep their margin funds in a segregated environment, benefiting from U.S. rules regarding fiduciary obligations of intermediaries and the U.S. insolvency regime. In Phase II, members of Eurex Clearing will be able to clear USD and EUR benchmark products traded at Eurex US, and use one common collateral pool to portfolio-margin European and U.S. products. Certain European benchmark derivatives currently traded exclusively on Eurex will be cross-listed on Eurex US, allowing for 21 hours of trading and full fungibility of these products. Implementation of Phase II is subject to regulatory approval from the Commodity Futures Trading Commission and European regulators.

# 100 Million Contracts Traded on Eurex in September

- Second highest monthly trading volume in the Euro-Bund Futures
- Trading in Dutch stock options up 25 percent year-on-year
- Trading in French stock options for the first nine month doubled year-on-year

Trading volume at the international derivatives market Eurex continued to grow in September. Approximately 100 million contracts were traded at the world's largest derivatives exchange in September, 31 percent more than in the previous month. Daily average trading volume in September was 4.5 million contracts. At 804 million contracts, turnover for the first three quarters of 2004 represents a year-on-year increase of around three percent.

The highest turnover in September was delivered by the interest rate derivatives segment, which with 57.2 million contracts accounted for more than half of the volume traded on Eurex. The Euro-Bund Futures contract retained its position as the most successful product with around 25 million contracts traded. This is the second highest monthly trading volume in this product. The Euro-Bobl Futures accounted for 15.5 million contracts, while the traded volume of Euro-Schatz Futures totaled 11.7 million contracts.

42.5 million contracts were traded in equity-based derivatives in September, 26.8 million of which were equity index derivatives and 15.7 million equity derivatives. The most heavily traded contract among the equity index derivatives was the future on the Dow Jones EURO STOXX<sup>SM</sup> 50 Index with 12.2 million contracts.

Trading in Dutch and French stock options remained strong. Some 911,000 contracts were traded in Dutch stock options in September, 24 percent more than in the same month of the previous year and a new monthly record. Traded volume in this segment for the first three quarters of 2004 was up by around 25 percent year-on-year to 6.4 million contracts. Some 232,000 contracts were traded in French stock options in September, 37 percent more than in the same month of the previous year. Trading volume for the first nine months of the year more than doubled to 2.1 million contracts (January to September 2003: 1 million contracts)

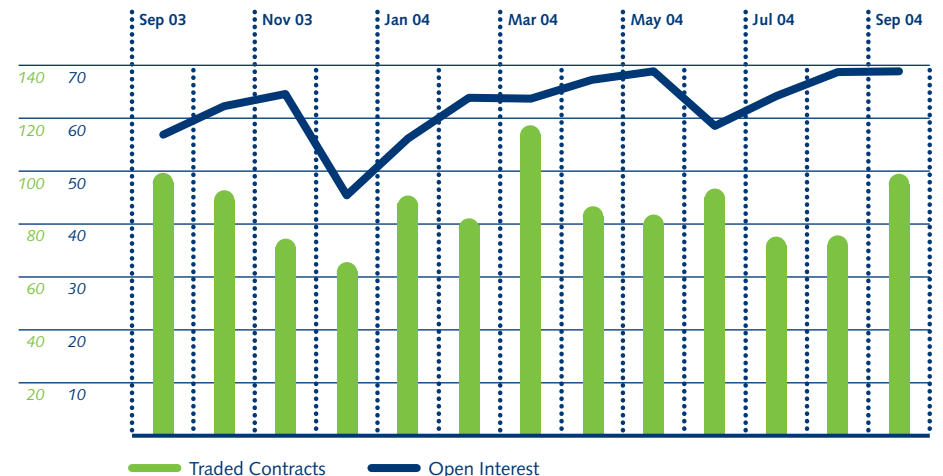

The electronic trading platform Eurex Bonds, which rounds off Eurex's fixed income product range, saw a volume of around EUR 8.5 billion (single counting) in August. Currently 31 participants are connected to Eurex Bonds.
