Key Figures Feb (insert)

Chicago-based The Clearing Corporation (CCorp) – Eurex US's clearing partner – and Eurex US have filed on March 14, 2005, for regulatory approval with the Commodity Futures Trading Commission (CFTC), the U.S. regulator, for implementation of the second phase of the Global Clearing Link. As the first true transatlantic clearing cooperation, the Global Clearing Link (GCL) between Eurex Clearing and The Clearing Corporation offers exchange participants worldwide unprecedented flexibility in trading and clearing of benchmark products denominated in euros and U.S. dollars. In addition, Phase II of the GCL will pave the way for fungible trading of selected EUR-denominated products both on Eurex US and Eurex.

The planned listing of Eurex benchmark products on Eurex US will extend trading hours for these products to a total of 23 hours. They will thus be available during afternoon trading in the U.S., as well as during regular trading hours in Asia. U.S. market participants will then be able to trade until 16:00 Chicago time; participants in the Asia-Pacific region will benefit from opening at 9:00 Sydney time, eight hours earlier than before.

Products included within the scope of the GCL will include the European fixed income futures Euro-Bund (ten years), Euro-Bobl (five years) and Euro-Schatz (two years) and options on these futures; plus equity index futures on the pan-European blue chip index Dow Jones EURO STOXX<sup>SM</sup> 50 and the German blue chip index DAX<sup>®</sup>. With Phase II of the GCL, these products will be fully fungible between Eurex and Eurex US.

### Stronger U.S. Market Penetration

The GCL will provide for enhanced access to Eurex's European benchmark products via a U.S.-regulated exchange, to market participants both in the U.S. and the Asia-Pacific region. At the same time, participants trading on U.S. exchanges only will get access to Eurex benchmark products through the U.S.-regulated platform for the first time. The growing share of traded volume attributable to Eurex participants located in the U.S. is evidence of their strong interest in these products.

### DAX® Futures: Traded Contracts (in Millions)

#### Clearing Cost Savings Through Streamlined and Consolidated Processes

With the start of Phase II, participants of Eurex Clearing AG will be able to carry products traded at Eurex US, through their existing clearing relationship with Eurex Clearing AG. The Global Clearing Link will substantially reduce costs for market participants through margin offsets and collateral pooling between USD- and EUR-denominated products traded on both exchanges.

With Phase I of the GCL, already in operation since November 2004, CCorp clearing participants have benefited from consolidating in a single clearing account their USD positions traded on Eurex US and their positions in certain European benchmark derivatives traded at Eurex.

Phase II of the Global Clearing Link is subject to regulatory approval.

For any further information, please feel free to contact Tobias Knobbe on T +49-69-211-1 23 39, e-mail: [Tobias.Knobbe@eurexchange.com](mailto:Tobias.Knobbe@eurexchange.com).

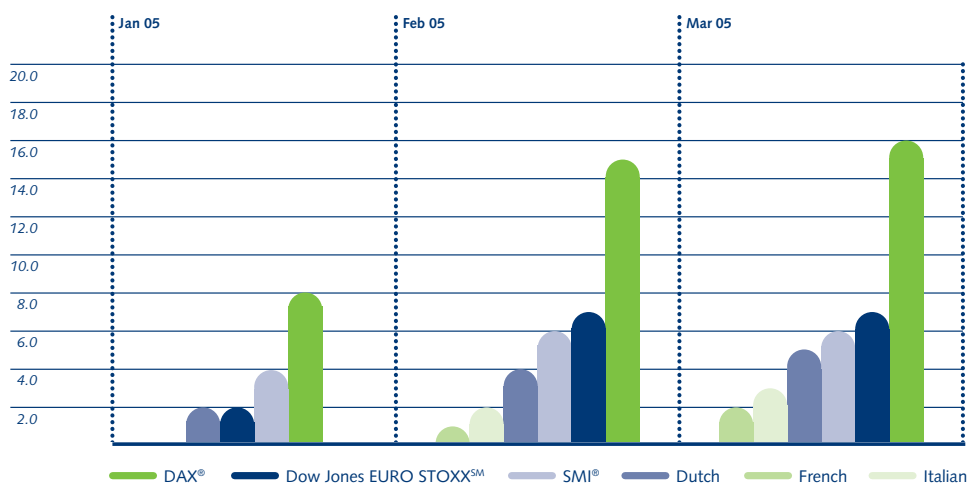

## Liquidity in Eurex European Equity Options Continues to Increase

The Continuous Market-Making model – implemented by Eurex only three months ago – has already turned out to be very successful. The world's most successful derivatives exchange further boosted order book liquidity, with first-quarter order book volumes in the French, Italian and Dutch equity options showing an average year-on-year increase of 32 percent. The exchange thus not only enhanced the benefits available to its customers, but also further successfully strengthened its position as the leading trading platform for European blue chip equity products.

In January 2005, Eurex had implemented a new, enhanced Market-Making model, allowing Market Makers to choose between two alternatives – Permanent Market-Making on the one hand, and Advanced Market-Making on the other hand. Permanent Market-Making requires Market Makers to continuously quote for equity, equity index or EXTF options. The newly-introduced Advanced Market-Making – extended to include Eurex's Nordic segment at the beginning of April – comprises continuous quotation for pre-defined product packages. Currently, there are seven of these available, for the blue chip indexes Dow Jones EURO STOXX<sup>SM</sup> 50, DAX<sup>®</sup> and SMI<sup>®</sup>, as well as for Dutch, French, Italian and Nordic equity options.

A total of 33 institutions have already committed to continuous quotation. This includes 19 that have opted for Advanced Market-Making, and are currently quoting 39 packages.

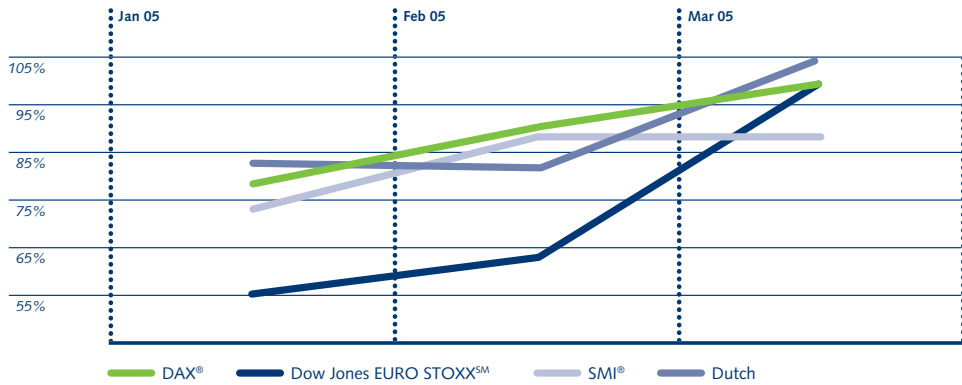

### Number of Quoted Packages

### Soaring Liquidity and Transparency Levels

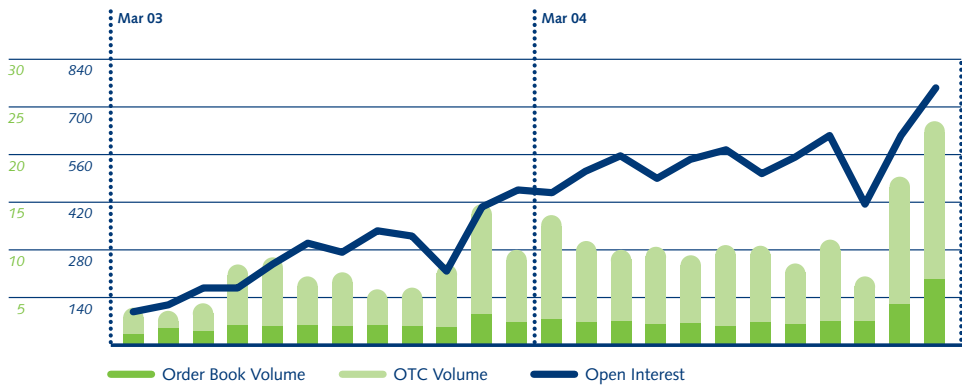

Overall, Permanent and Advanced Market Makers actively support roughly 160 different equity options by continuously quoting prices. This has resulted in a further significant increase in liquidity and transparency levels for these products. For example, the adjacent chart clearly demonstrates that, since mid-January, firm prices have been quoted in all Dow Jones EURO STOXX<sup>SM</sup> issues throughout trading hours. Prior to the implementation of the Continuous Market-Making model, quotes were maintained during 30 to 40 percent of the trading session only. Meanwhile, at least four Market Makers not only provide for vastly enhanced transparency, but also for impressive market depth levels.

### Daily Trading Hours Covered by Quotation (in Percent)

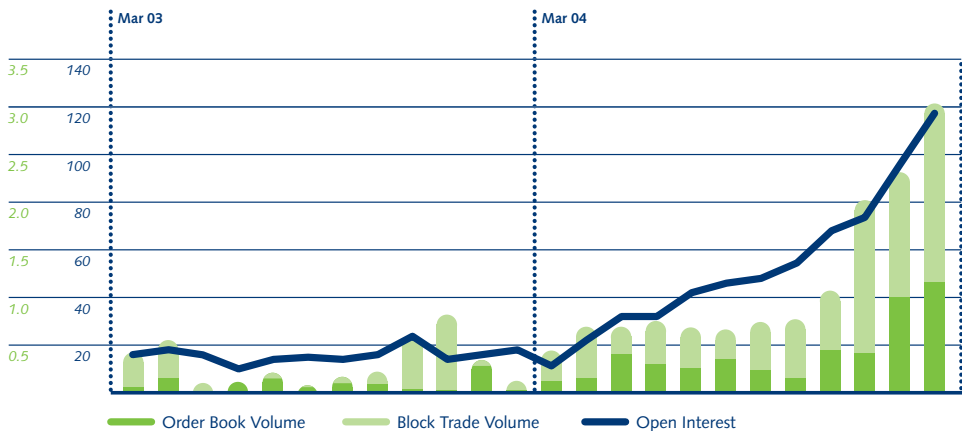

Volume figures also reflect the strongly-enhanced liquidity. The increase in volumes was most pronounced for French equity options, with the market share in options on French Dow Jones EURO STOXX<sup>SM</sup> constituents rising from 15 percent in December 2004 to 26 percent in March 2005. Within the Italian segment, Eurex was able to increase its market share from four percent prior to the introduction of the new Market-Making scheme to 20 percent in March. The Dutch segment improved its market share to 15 percent.

### Eurex French Equity Options: Traded Contracts & Open Interest (in Thousands)

### Eurex Italian Equity Options: Traded Contracts & Open Interest (in Thousands)

The combination of Continuous Market-Making and improved cost efficiency (thanks to capped OTC Block Trade fees) has enabled Eurex to also attract further business from the over-the-counter (OTC) market, adding to the overall growth in exchange-traded contracts. During the first quarter of 2005, for instance, trading in extra-large blocks grew by 99 percent for French equity options and 57 percent for Italian equity options.

For any further information, please feel free to contact Dr. Axel Vischer on T +49-69-211-1 72 74, e-mail: [Axel.Vischer@eurexchange.com](mailto:Axel.Vischer@eurexchange.com).

## Eurex to Extend Advanced Market-Making to Nordic Equity Options

**With effect from April 1, 2005, Eurex has further extended the scope of its new Advanced Market-Making scheme to also include the Nordic stock option and LEPO segment. Several days before, on March 21, 2005, options along with LEPOs on the shares of Finnish Sampo Oyj were added to the segment.**

The new quoting package covers the entire range of Eurex-listed OMXH25 index options and Nordic equity options, the latter including options on Nokia, Stora Enso, TeliaSonera, Elisa, Tieto Enator, UPM-Kymmene and Sampo. Market Makers must quote seven out of eight options products in the package (this number includes OMXH25 index options).

By implementing the Advanced Market-Making model, Eurex now also provides a higher-quality order book in its Nordic segment. Eurex market participants will thus benefit from new trading opportunities, thanks to enhanced liquidity and tighter bid/ask spreads. Taking advantage of the exchange's global liquidity network, they can exploit these new advantages quickly, efficiently and regardless of location. Furthermore, the capping of block trade fees at the amount incurred for trading 2,000 contracts, effective March 1, 2005, makes Eurex an even more attractive platform for trades which were traditionally executed over the counter. For an Advanced Market Maker in this segment, this means a maximum fee of EUR 100 for a trade involving 2,000 contracts or more.

## New: Permanent Market-Making in EUR-Denominated Fixed Income Options

With effect from March 1, 2005, Eurex has extended its Market-Making concept for EUR-denominated fixed income options by including continuous quotation in this product segment. By implementing the Continuous Market-Making model, Eurex provides an even higher-quality order book in all of its interest rate options – creating, at the same time, new and attractive trading opportunities along the European yield curve.

Alongside the existing Regular Market-Making scheme, Market Makers are now also free to quote prices in individual interest rate options on a permanent basis. In this case, they are obliged to maintain quotes in nine out of eleven exercise prices around the current at-the-money exercise price, for a minimum quote size of 25 contracts and subject to a maximum bid/ask spread, during 85 percent of the trading session. In contrast, Market Makers assuming Regular Market-Making responsibilities are required to respond to any quote request, for a minimum quote size of 50 contracts and also subject to a maximum bid/ask spread.

To further mitigate the higher potential risks related to continuous quotation, Eurex has introduced the Market Maker Connection Monitor also for EUR-denominated interest rate options, also with effect from March 1. The new security software utility monitors the connection between the Eurex back-end and the Market Maker's MISS (Member Integrated System Server). If the connection is interrupted, all outstanding quotes of the affected Market Maker will be automatically deleted, thus considerably reducing the participant's exposure in the event of technical problems.

For any further information, please feel free to contact Rex Jones on T +49-69-211-1 78 06, e-mail: [Rex.Jones@eurexchange.com](mailto:Rex.Jones@eurexchange.com).

## EUREX SERVICES

## Eurex Supports OIC Roadshows for Fund Managers in European Financial Centers

**Eurex will take part in a pan-European roadshow that targets fund managers and institutional investors. The presentations will illustrate the applications of exchange-listed derivatives in professional asset management.**

The series of presentations, initiated by the Chicago-based Options Industry Council, will inform decision-makers in the fund industry about the wealth of applications for derivatives in fund management. Renowned representatives from the derivatives world – such as Marty Kearny from the OIC – will give a hands-on view of the latest international trends in the industry.

Lectures on the use of derivatives and the local regulatory framework will be supplemented by a panel discussion at the end of the event. Participants will get an opportunity to discuss the practical applications of derivatives, both with the presenters and also with representatives from the fund management industry.

These one-day seminars are free. They will be held in five European financial centers, between April 6 and April 15, 2005.

Amsterdam, Wednesday, April 06, 2005	NH Barbizon Palace Prins Hendrikkade 59-72 1012 AD Amsterdam
Zurich, Friday, April 08, 2005	Zurich Marriott Neumühlequai 42 8001 Zurich
London, Monday, April 11, 2005	ICA Chartered Accountants Hall Moorgate London EC2
Frankfurt, Wednesday, April 13, 2005	Maritim Hotel Theodor-Heuss-Allee 3 60486 Frankfurt
Milan, Friday, April 15, 2005	Hilton Milan Via L. Galvani 12 20124 Milan

Further information on the event and the registration is available on the FOW website at [www.fow.com](http://www.fow.com) > Events.

# New: Online Calculation of Option Prices on the Eurex Website

The Eurex OptionMaster is now available for free use on the Eurex Website. This online option pricing calculator gives investors the opportunity to familiarize themselves with the pricing and price sensitivity of options.

The Eurex OptionMaster allows you to calculate

- theoretical option prices;
- option sensitivity parameters (commonly referred to as “Greeks”); and
- implied volatilities of options.

Furthermore, it allows for a simulation of the impact of various price and volatility scenarios on the calculated prices. The results of such a simulation are illustrated using a Price/Vola Matrix, which provides an overview of potential price developments, depending on the scenario. The enhanced transparency will give you a more precise idea as to how option prices behave.

# Trading Volume on Eurex Climbs 24 Percent to 100 Million Contracts in February

- Record turnover for Euro-Bund Futures, Options on Euro-Bund Futures, and Dow Jones EURO STOXX<sup>SM</sup> 50 Index Options

Eurex turned over around 100 million contracts in February, an increase of approximately 24 percent year-on-year (February 2004: 81 million contracts). This equates to an average of around five million contracts traded and settled every day. Open interest, or the number of open positions, rose to 77.5 million contracts by the end of February, a year-on-year increase of approximately 21 percent (end of February 2004: 63.9 million contracts).

In February, fixed income derivatives was again the strongest performing segment, with 58.3 million contracts traded. At 27.2 million contracts, trading in Euro-Bund Futures was up 57 percent on February 2004, setting a new monthly record (previous record: 25.5 million contracts in January 2005). There was also record trading in Options on Euro-Bund Futures, with 5.1 million contracts turned over (previous record: 3.4 million contracts in January 2005). Trading in Euro-Bobl Futures increased year-on-year by six percent to 13 million contracts, while the Euro-Schatz Futures 11.4 million contracts traded, a rise of approximately 14 percent.

Equity-based derivatives also recorded strong growth in February, with turnover of around 42 million contracts. Of these, 23.3 million were for equity index derivatives, a year-on-year rise of around 22 percent, and some 18.7 million for stock options, an increase of approximately six percent over the same period. Futures and options on the Dow Jones EURO STOXX<sup>SM</sup> 50 Index were, again in February, the strongest performing contracts for equity index derivatives. The option on the Dow Jones EURO STOXX<sup>SM</sup> 50 Index set a new record of 7.8 million contracts (previous record: 7.7 million contracts in March 2004). Turnover in trading with Futures on the Dow Jones EURO STOXX<sup>SM</sup> 50 Index climbed by approximately 20 percent year-on-year, to 8.9 million contracts.

The electronic trading platform Eurex Bonds, which rounds off Eurex's fixed income product range, turned over a volume of EUR 9.6 billion in February (single counting). Monthly turnover in the "Jumbo-Pfandbriefe" segment rose 54 percent on the year, to end at roughly EUR 1.4 billion. Trading in the EUR-Covered Bonds segment – launched in November 2004 – rose more than 261 percent month-on-month to EUR 298 million.
