1 Introduction

The purpose of this document is to describe the content of the raw data files for Clearing Members, Trading Members and Settlement Institutions.

This document also provides an overview of the available reports. The report layouts are described in detail in Member documentation "Description Reports Layout".

The risk based margining reports as well as the fee reports layout and content are described in the XML Report Reference Manual communicated in course of Eurex publications. These reports are thus no longer included in this document. The risk and the fee reports are still though selectable via the Securities Clearing GUI.

This document consists of seven chapters:

Chapter 1 Introduction

Chapter 2 General Layout

Chapter 3 Overview of Raw Reports

Chapter 4 Raw Data Files Description

Chapter 5 Values Overview

Chapter 5 Appendix

This document refers to participants with the following roles:

- Trading Member (TM)
- Clearing Member (CM)
- Settlement Institution (SI)

Additionally the description of Raw Data file transmitted in SWIFT format MT536 and SWIFT like format MT512 is provided in a separate document – "Member File Based & SWIFT Interface".

All abbreviations used in this document are explained in the Appendix.

This version replaces all former versions. Changes introduced with CCP Release 17.0 are marked in yellow.

1.1 General Changes due to CCP Release 17.0

With CCP release 17.0 that will be implemented on 18 November 2019 changes are described for Repo Transaction report

• 'TC750 Repo Contracts' in chapter 4.2.3 Raw Data File RAWTC750 - Repo Contracts

For better readability only the report heading is highlighted, though the report is completely new.

2 General Layout

2.1 General Layout of Raw Data Files

Each report is described by an overview, a table defining the individual fields and an example. First an overview is provided that consists out of report name and code, purpose, notes on format and notes on creation. The table shows the fields of the report and describes their content.

The report overview is provided according to the following format:

- Data records
- · End of report records.

All data records start with the three characters "RAW", followed by a set of common fields, followed in turn by a set of report specific fields.

End of report records start with the three characters "END" followed by the report ID code.

Report example:

· Data records

Common fields:

RAW<report ID><report effective date><report processing date><environment number> Report-specific fields:

<report-specific field><report specific field><report specific field><...

End of report records

End of report:

END<report ID>

Depending on the type of the report, the environment number changes. In addition, the production and the simulation environment can be differentiated numerically. All reports created on CCP obtain the CCP environment numbers for production and simulation.

Environment	Eurex	ССР
Production environment	00	20
Simulation environment	01	21

2.2 General Layout of Risk Margin Calculation Files

Records in the files for risk margin calculation are provided only as "Data" records type. Each file for risk margin calculation contains fixed length records in ASCII data format. The last record in the file will not contain data, but will mark the end of the file and contain the number of data records.

CCP Release 17.0	
Description of Reports - RAW Data	27.08.2018
	Page 7 of 73

2.3 Raw Data Interface

The raw data reports are designed to enable the straight through processing of reported data by the Member's back office. Since these reports are not intended to give information at a glance, the data is not presented in a printable form, but written out to a file in the form of records. These records contain all the relevant data fields in alphanumeric format. The data can either be imported into standard office applications (e.g., MS Excel®) or processed by larger scale data consolidation routines. This allows the data to be processed directly by automated data processing for the purpose of Member specific, customized reports or data consolidation according to the Member's own requirements.

2.4 Raw Data File Description

Each raw data file contains fixed length records in ASCII data format.

The information contained in the raw data reports correlates to the information and sorting order given by the standard layout reports. Calculated summary fields are not included in the raw data reports. These fields can be calculated individually during the post-processing of data according to specific Member preferences.

"Data Type": N – Numeric (right-aligned)

A - Alphanumeric (left-aligned, trailing spaces)

F - Freetext (left-aligned, trailing spaces)

Example of formats for the "Field Length" and "Special Format" columns in the tables below:

Example	Description
22 (<u>+</u> 015.5)	Overall length of 22 characters: 15 before the decimal point (at least one zero), "." as separator, 5 behind the decimal point. There are leading zeros. There are trailing zeros after the decimal point. There is a leading sign.
14 (<u>+</u> 7.5)	Overall length of 14 characters: 7 before the decimal point (at least one zero), "." as separator, 5 behind the decimal point. There are no leading zeros. There are trailing zeros after the decimal point. There is a leading sign.
19 (13.5)	Overall length of 19 characters: 13 before the decimal point (at least one zero), "." as separator, 5 behind the decimal point. There is no sign. There are no leading zeros. There are trailing zeros after the decimal point.
012	Overall length of 12 characters, without decimal point, without sign. There are leading zeros.
12	Overall length of 12 characters, without decimal point, without sign. There are no leading zeros.
-12	Overall length of 13 characters, without decimal point. There are no leading zeros. The leading sign is "-" or space.

	Page 8 of 73

Example	Description
22 ([-]15.5)	Overall length of 22 characters: 15 before the decimal point (at least one zero), "." as separator, 5 behind the decimal point. There are leading spaces. There are trailing zeros after the decimal point. The leading sign is "-" or space.
21 ([]15.5)	Overall length of 21 characters: 15 before the decimal point (at least one zero), "." as separator, 5 behind the decimal point. There are leading spaces. There are trailing zeros after the decimal point.
22 (-15.5)	Overall length of 22 characters: 15 before the decimal point (at least one zero), "." as separator, 5 behind the decimal point. There are no leading spaces. There are trailing zeros after the decimal point. The leading sign is "-" or space.

2.5 File Processing and Maintenance

In contrast to printable reports, raw data files have to be processed additionally by Member-specific in-house applications to enable their use.

The deletion of old raw data files lies in the responsibility of the Members.

	Page 9 of 73

3 Overview of Raw Reports

Reports are assigned to different reporting groups. The following reporting groups are supported:

Reporting group	Description
BRP	With CCP release 12.0 (T2S wave 4), the CBFs STD/SDS1/SDS2 settlement cycles were decommissioned and replaced by the night time settlement (NTS) and real-time settlement (RTS) supported by T2S.
	With the exception of report CD270 that will remain in reporting group 'BRP', the reports for euro equities currently comprised in the reporting group 'BRP' will be moved to the reporting group 'CORPT'.
CORPT	"CORPT" refers to continuous reporting for fixed income and equities (including equities from the EC - International Service). The respective reports are time triggered by the CCP reflecting the processing results within these time windows. With CCP release 15.0 the number of the reporting runs is enhanced by one additional run to decrease the gap between reporting run 5 and reporting run 6. Therewith, 10 reporting runs will be provided with the introduction of the update of CCP release 15.0. CORPT Reporting Runs: Reporting Run 1 – 05:30 hrs Reporting Run 2 – 08:30 hrs Reporting Run 3 – 11:00 hrs Reporting Run 5 – 14:30 hrs Reporting Run 6 – 16:00 hrs Reporting Run 7 – 16:45 hrs Reporting Run 8 – 19:00 hrs Reporting Run 10 – 22:00 hrs Reporting Run 11 – 01:00 hrs
EOD	Reports that are created end of day. These reports are independent of instrument type, currency and custody type.
BONDS	Bonds specific reporting
EXS	Specific reporting of Equities, XTFs, Funds, ADR, GDR and Subscription Rights
OTHER	Risk Engine reporting, Fee reporting

3.1 Detailed Delivery Reports

The event triggered batch oriented reporting (BRP) of the Detailed Delivery Reports CE260, CE270 and the CE275 report for euro equities were decommissioned with CCP Release 12.0 (T2S wave 4). The reporting of the 'BRP' version of CE260 and CE270 were incorporated in the 'CORPT' version of the respective reports. The content of report CE275 was incorporated in the 'CORPT' version of report CE270.

The CORPT timeline is event and time triggered. Time triggered means report creation takes place at a fixed but configurable time per day.

One further 'CORPT' reporting run was added to the already existing 8 runs with CCP release 12.0 (T2S wave 4). If a Member selects a report, the Member receives all 9 reports which are produced for each business day.

The following table provides an overview of when CORPT reports are created.

	Continuous reporting (CORPT)				
	Creation Cycle	Report ID			
	ı				
Event triggered	BOD	RAWCE260/RS810			
	1

Eurex Clearing AG	PUBLIC
CCP Release 17.0	
Description of Reports - RAW Data	27.08.2018
	Page 14 of 73

3.1.1 Historical reports

The historical reports can be requested up to four CCP business days backwards. For the request and creation of historical reports the CCP calendar should be used. No request is required for the reports provided via the Common Report Engine, when the report has already been selected. All selected reports are kept for at least ten business days in the past. If a historical report, which has not already been selected, is requested for provisioning via the Common Report Engine (CRE), it can be found under the historical date in the CRE directories.

3.1.2 Trade Identification

In order to identify trades uniformly on various reports the "TRADE NUMBER" is used, whereas its value is the one received from the trading location. A similar mechanism is valid for deliveries.

Technically it means that trades in the reports are uniquely identified by the following values: "TRADING LOCATION", "TRADE NUMBER", "LEG NUMBER" (only for Repo trades), "TRADE DATE", "ISIN" and "ORDER NUMBER".

For Eurex Repo the Order Number contains the external trade reference. It is unique for one full repo trade and identical for all four legs of it.

Deliveries are always identified by "DELIVERY ID", "SETTLEMENT LOCATION" (or "CSD") and "SETTLEMENT DATE".

3.1.3 Role Specific Reporting

Some reports are created in separate instances for each role, i.e. up to three report instances (depending on the recipients) are created, one supporting the Trading Member role, one supporting the Clearing Member role, and one supporting the Settlement Institution role. The three versions have distinct report IDs but share the same layout.

The report ID is defined as follows:

- Current ID unchanged for the Clearing Member's version (e.g. RAWCE260).
- Current ID plus 1 for the Settlement Institution's version (e.g. RAWCE261).
- Current ID plus 2 for the Trading Member's version (e.g. RAWCE262).

3.1.4 Corporate Action Entitlement Day Reporting

The following list of reports shows all reports, where trades can be displayed on an entitlement day of a corporate action, and represents the situation on the entitlement day. On all days before the entitlement day they are reported "cum". On all days after the entitlement day they are reported "ex".

The corporate action processing for EC-IS (Eurex Clearing International Service) trades takes place at the respective local CSD. ECAG receives feedback on trades impacted by corporate action processing on or after the entitlement day. Till the feedback is received by ECAG the trades will be reported as "cum" and once the updates are received the trades will be reported as "ex".

Eurex Clearing AG	PUBLIC
CCP Release 17.0	
Description of Reports - RAW Data	27.08.2018
	Page 15 of 73
	<u> </u>

For the events having impact on underlying (e.g. ISIN Change), in the reports CE565 and CE570 the field "Corporate Action Indicator" represents whether the trade is "cum" or "ex". When the indicator is "Y" then the trade is Ex.

Report RAWCA550 EC-IS CA Confirmation contains corporate action entitlement settlement information for income events and events having no impact on underlying (i.e. rights and forward split without ISIN change).

Report ID	Name of the report	Reported at the entitlement day
RAWCA130	CA130 Compensation Partner	Cum for Re-Run / Ex for Cancel Run

3.2 Overview of Risk Margin Calculation Files

3.2.1 Proposed Files for Risk Margin Calculation

The files provided by the CCP allow Members to use calculated theoretical values (i.e., risk arrays), security and coupon parameters to verify the margin calculation and to margin their customers and Trading Members.

The following files for margin calculation are provided for both the Equity and Fixed Income securities markets:

Code	File Name
FPMGBP	Security Margin Class and Group Information
FPTHEE	Theoretical Values: Equities
FPTHES	Theoretical Values: Unconditional Subscription Rights
FPTHEB	Theoretical Values: Bonds
FPTHEC	Theoretical Values: Coupons

3.2.2 Description of Risk Margin Calculation Files

The risk margin calculation files are described in detail in the Eurex Exchange Member interface specifications – File interface layouts and support Members in performing risk margin calculation. These files are not Member-specific, i.e. the same files are sent to all Members and are available on the Internet. The files are sent in complete form, i.e. they do not only contain the changes from the last update.

Eurex Clearing AG	PUBLIC
CCP Release 17.0	
Description of Reports - RAW Data	27.08.2018

3.3 Report Extension

The following table shows the possible report extension per reporting group.

Reporting Group	Compressed	Decompressed
BRP	.clis	.lis
CORPT	.clisCORPT	.liscorpt
EOD	.clis	.lis
BONDS	.clisBONDS	.lisbonds
EXS	.clis	.lis
OTHER	.clis	.lis

Note: reports created within the CORPT runs (RC001 to RC011) furthermore are numbered accordingly with "001"..."011".

For reports sent via SNA the report name can be defined by the participant itself in cooperation with DBAG. Reports sent via SWIFT are sent in the SWIFT format.

4 Raw Data Files Description

4.1 Corporate Action Raw Data Files

4.1.1 Raw Data File RAWCA130 - Compensation Partner

This raw data file lists trades affected by non-income corporate action events resulting from cancellations/ re-runs that must be handled manually between the CCP and the Clearing Member and/or the Clearing Member and Trading Member respectively. Entries from UK products (CREST) and entries from EC-IS are not considered in this report.

RAW	/CA130	Compensation Partner			
No.	Field	Field Length	Data Type	Special Format	Description
1	Report ID Code	8	A		Identification of the raw data stream. Values include: "RAWCA130" – Valid data record. "ENDCA130" – End of raw data stream.
2	Report Effective Date	8	N	YYYYMMD D	Business day on which the raw data stream is created.
3	Report Processing Date	8	Ν	YYYYMMD D	Creation day of the raw data stream.
4	Environment Number	2	A		Environment number this raw data file belongs to. Possible values are: "20" – Production environment. "21" – Simulation environment.
5	Member ID of Clearing Member	5	А		Identification of the Clearing Member.
6	Settlement Location	5	А		Settlement location. See chapter 5.
7	Settlement Account	12	A		Branch settlement account.
8	Headquarter Settlement Account	12	A		Headquarter Settlement Account. If no "RegÜber" relation exists the head settlement account is filled as the settlement account

4.1.3 Raw Data File RAWCA160 - Custody Payment Statement

The raw data file provides cash payments out of corporate action events (original-runs, re-runs and cancellation-runs) with all trades that are affected by the event. It also shows reversal cash payments resulting from trade cancellations on T+1.

This report shows coupon compensations for repos and late cash bond trades. The total amount is shown for each Clearing Member.

Due to the Securities Lending specific report RPTCL165, that was introduced in order to avoid duplicate information to the clearing Members the loans under the CCP Service for Securities Lending will be deselected from the report.

It is generated during the end-of-day processing. Entries from UK products (CREST) and entries from EC-IS are not considered in this report.

4.1.4 Raw Data File RAWCA180 - Capital Adjustments on Trades

The raw data file contains information about the impact of original runs (and cancellation-/re-runs⁷) of corporate action non-income events on trades. The original trade is always shown first. The raw data file is generated during the end-of-day processing. Entries from UK products (CREST) and entries from EC-IS are not considered in this report.

With T2S wave 2 (CCP Release 10.0) the report also shows fractions resulting out of corporate actions nominal change / nominal ISIN change and additional rights.

The fractions are reported on the day of their creation. Fractions resulting from surplus and offset quantities are displayed separately; i.e. multiple fraction records can be displayed for one trade. A new value ('C') for the action type is introduced to indicate a fraction out of closed part of trade.

4.2 Trade Raw Data Files

4.2.1 Raw Data File RAWCB230 - Daily Gross Delivery Mgmt.

This raw data file contains all gross delivery management transactions performed on the current day by the Clearing Member, Settlement Institution or on behalf of by Clearing Supervision. Gross delivery management can be performed via the Securities Clearing GUI and the Delivery Instruction Data Carrier file. Additionally this file includes the buy-in block and release activity performed by Clearing Supervision.

It is generated during the end-of-day processing. Entries from EC-IS are not considered in this report but are included in the CB530 EC-IS Daily Gross Dlv Mgmt.

4.2.4 Raw Data File RAWTC755 - Repo Fixings

The raw data file contains repo trades (Open, Open-variable and Variable) and their corresponding legs, which have been subject to modifications due to fixing, closing or rate change. It is a report showing the "delta", i.e. the change referring to the last status of the, e.g., settlement date, repo (reference) rate, repo interest amount, settlement amount, in comparison to the last reporting. For every leg the settlement status on the levels CCP-CM and CM-Customer is displayed separately.

It is generated 9 times intraday. Entries from EC-IS are not considered in this report.

4.3 Cash Raw Data Files

4.3.1 Raw Data File RAWCD150 - Cash Obligations

The raw data file presents an indication of the necessary cash amounts the Clearing Member or Settlement Institution have to provide for the settlement of the trades (in the offsetting block) in the related cash account at respective cash settlement location.

It is generated during the end-of-day processing. Entries from UK products (CREST) and entries from EC-IS are not considered in this report.

4.3.2 Raw Data File RAWCD250 - Settled Cash Transactions

The raw data file represents all cash transactions that have been booked on the current business day (value date equals current business day) as well as those that have been initiated during the end-of-day processing with value date for the next business day. Cash transactions initiated for the current business day as value date will be reported as settled.

It is created during end-of-day processing. Entries from EC-IS are not considered in this report but are included in the CD550 EC-IS Settled Cash Trans.

Eurex Clearing AG	PUBLIC
CCP Release 17.0	
Description of Reports - RAW Data	27.08.2018
	Page 51 of 73

With T2S wave 2 (CCP Release 10.0) the fractional part that results out of a corporate action processing is compensated in cash. Furthermore, cash transactions are generated for the settlement amount of the trade, if the nominal/quantity of the trade is equal to zero after round down. The respective cash transactions are reported on CD250 "Settled Cash Transactions".

The cash compensation will be represented by the following four cash transaction types:

- 492 RETURN SETTLEMENT AMT RCV
- 493 RETURN SETTLEMENT AMT PAID
- 494 FRACTION CSH SETTLE RCV
- 495 FRACTION CSH SETTLE PAID.

The cash transaction types 494 and 495 are created for the cash compensation amount of the fractions. The amount is calculated by fraction quantity and settlement price (494 for the buy side, 495 for the sell side).

If the nominal/quantity of the trade is equal to zero after cutting the fractions, i.e. after round down (here "round down to zero") cash transactions are required to settle the remaining amount of the trade and to thus transfer the amount from the buyer to the seller since normal DvP settlement is no longer possible. Therefore, the new cash transaction types 492 and 493 are generated (492 to move the amount to the sell side, 493 to remove the amount from the buy side).

With CCP release 12.0 (T2S wave 4) the following two cash transaction types were implemented representing cash deviations resulting from partial settlement at T2S (please refer to 4.4.2 Raw Data File RAWCE250 – Partial Delivery Deviating Cash Amount):

- 490 DEL INST DEVIAT CSH AMNT RCV
- 491 DEL INST DEVIAT CSH AMNT PAID.

4.3.4 Raw Data File RAWRS860 - GCPSEL SRLH Settled Cash Transactions

Report RAWRS860 is for Specific Repo License Holder (SRLH) that use the GC Pooling Select. The raw data file represents all cash transactions that have been booked on the current business day (value date equals current business day) as well as those that have been initiated during the end-of-day processing with value date for the next business day. Cash transactions initiated for the current business day as value date will be reported as settled. This report is identical to RAWCD250 report in layout.

It is created during end-of-day processing.

4.4 Settlement Raw Data Files

4.4.1 Raw Data File RAWCB220 - Daily Fines

The raw data file contains daily fines and interest of delay, which results from delayed deliveries in Euro equities to be settled at CBF. It is generated during the end-of-day processing.

RAW	/CB220	Daily Fines			
No.	Field	Field Lengt h	Data Type	Special Format	Description
1	Report ID Code	8	A		Identification of the raw data stream. Values include: "RAWCB220" – Valid data record. "ENDCB220" – End of raw data stream.
2	Report Effective Date	8	N	YYYYMMD D	Business day on which the raw data stream is created.
3	Report Processing Date	8	N	YYYYMMD D	Creation day of the raw data stream.
4	Environment Number	2	A		Environment number this raw data file belongs to. Possible values are: "20" – Production environment. "21" – Simulation environment.
5	Member ID of Clearing Member	5	A		Member ID of Clearing Member.
6	Security Settlement Currency	3	А		Security settlement currency. See chapter 5.
7	Type of Instrument	3	А		Instrument type. See chapter 5.
8	Fine P/Day	8	N	<u>+</u> 2.4	Fine percentage rate per day.
9	Minimum Fine	15	N	<u>+</u> 11.2	Minimum fine charged.
10	Maximum Fine	15	N	<u>+</u> 11.2	Maximum fine charged.

4.4.2 Raw Data File RAWCE25011 – Partial Delivery Deviating Cash Amount

With CCP release 12.0 (T2S wave 4), partial settlement of deliveries was introduced and it is possible that a delivery does not settle fully on a T2S settlement day. If the unsettled part is cancelled at the end of the T2S business day, deviations of the partially settled amount between the CSDs and the CCP can occur.

The deviation can only occur, if more than one trade is comprised in a delivery instruction. In that case, the CSDs use an average price per unit to calculate the amount for the settled part of the delivery instruction whereas the corresponding trades, which were packed into the delivery instruction, have their own prices. When the trades are settled the amount received in the partially settled feedback and the amount of the trade deviate.

The raw data file RAWCE250 represents the cash transactions for deviations resulting out of partial settlement, which have incurred on the current business day (value date equals current business day). The report shows the cash amount deviation and the resulting cash transaction to correct the bookings.

For the deviating amount the CCP generates a cash transaction. Two different cash transactions are generated depending on whether a member receives or delivers cash.

Creation takes place after the clean-up of the delivery instructions. This clean-up takes place between the cash run DTP6 at 16:30 hrs and the Night Time Processing at 18:00 hrs to enable members to reconcile the payments on the same business day.

Please note that as a result the last 2 digits of the name of the report are now '02' instead of '00'.

The cash transactions are represented by the following cash transaction types:

- 490 DEL INST DEVIAT CSH AMNT RCV
- 491 DEL INST DEVIAT CSH AMNT PAID

This report is a pipe "|" separated report.

Note: All Quantity and Amount fields contain comma as thousand separator.
