Deutsche Börse AG ("DBAG"), Clearstream Banking AG ("Clearstream"), Eurex Frankfurt AG ("Eurex"), Eurex Clearing AG ("Eurex Clearing"), Eurex Securities Transactions Services GmbH ("Eurex STS") and Eurex Repo GmbH ("Eurex Repo") are corporate entities and are registered under German law. Eurex Global Derivatives AG is a corporate entity and is registered under Swiss law. Clearstream Banking S.A. is a corporate entity and is registered under Luxembourg law. Eurex Frankfurt AG is the administrating and operating institution of Eurex Deutschland. Eurex Deutschland is in the following also referred to as the "Eurex Exchange".

All intellectual property, proprietary and other rights and interests in this publication and the subject matter hereof (other than certain trademarks and service marks listed below) are owned by DBAG or its affiliates and subsidiaries or used under authorization by their respective owners, including, without limitation, all patent, registered design, copyright, trademark and service mark rights. While reasonable care has been taken in the preparation of this publication to provide details that are accurate and not misleading at the time of publication DBAG, Clearstream, Eurex, Eurex Clearing, Eurex Repo as well as the Eurex Exchange and their respective subsidiaries, servants and agents (a) do not make any representations or warranties regarding the information contained herein, whether express or implied, including without limitation any implied warranty of merchantability or fitness for a particular purpose or any warranty with respect to the accuracy, correctness, quality, completeness or timeliness of such information, and (b) shall not be responsible or liable for any third party's use of any information contained herein under any circumstances, including, without limitation, in connection with actual trading or otherwise or for any errors or omissions contained in this publication.

This publication is published for information purposes only and shall not constitute investment advice respectively does not constitute an offer, solicitation or recommendation to acquire or dispose of any investment or to engage in any other transaction. This publication is not intended for solicitation purposes but only for use as general information. All descriptions, examples and calculations contained in this publication are for illustrative purposes only.

Eurex and Eurex Clearing offer services directly to members of the Eurex Exchange respectively to clearing members of Eurex Clearing. Those who desire to trade any products available on the Eurex market or who desire to offer and sell any such products to others or who desire to possess a clearing license of Eurex Clearing in order to participate in the clearing process provided by Eurex Clearing, should consider legal and regulatory requirements of those jurisdictions relevant to them, as well as the risks associated with such products, before doing so.

Only Eurex derivatives that are CFTC-approved may be traded via direct access in the United States or by United States persons. A complete, up-to-date list of Eurex derivatives that are CFTC-approved is available at: <https://www.eurex.com/ex-en/rules-regs/eurex-derivatives-us/direct-market-access-from-the-us>.

In addition, Eurex representatives and participants may familiarize U.S. Qualified Institutional Buyers (QIBs) and broker-dealers with certain eligible Eurex equity options and equity index options pursuant to the terms of the SEC's July 1, 2013 Class No-Action Relief. A complete, up-to-date list of Eurex options that are eligible under the SEC Class No-Action Relief is available at: <https://www.eurex.com/ex-en/rules-regs/eurex-derivatives-us/eurex-options-in-the-us-for-eligible-customers>. Lastly, U.S. QIBs and broker-dealers trading on behalf of QIBs may trade certain

single-security futures and narrow-based security index futures subject to terms and conditions of the SEC's Exchange Act Release No. 60,194 (June 30, 2009), 74 Fed. Reg. 32,200 (July 7, 2009) and the CFTC's Division of Clearing and Intermediary Oversight Advisory Concerning the Offer and Sale of Foreign Security Futures Products to Customers Located in the United States (June 8, 2010).

1. List of abbreviations

This section lists all the abbreviations used to describe the Excessive System Usage Fee (ESU Fee).

Abbreviation	Description
ALV	Allianz Option
AMM	Advanced Market Maker
CRE	Common Report Engine
DMM	Designated Market Maker
ESU Fee	Excessive System Usage Fee
FDAX	DAX® Futures
FESX	EURO STOXX 50® Index Futures
FGBL	Euro-Bund Futures
HFT	High-frequency trading
MM	Market Maker
MMPM	Market Maker performance measurement
OESX	EURO STOXX 50® Index Options
PMM	Permanent Market Maker
QP	Quote performance
SQ	Spread quality
T7	Eurex Exchange's trading architecture

Table 1 : Abbreviations

2. Calculation of Excessive System Usage Fee

In order to encourage a responsible attitude towards the use of the T7 system resources, Eurex Exchange defines limits for the number of transactions sent by each Participant. If a Participant exceeds the defined limits, then a fee for Excessive System Usage (ESU) may apply.

The transaction limit is calculated per Participant, per product, per trading day, and per limit type. There are three types of transaction limits: a transaction limit for standard orders, a transaction limit for all transactions which do not lead to a market data update as well as order modifications which lead to a cancellation without a trade¹ and a transaction limit for all transactions.

- **Transaction limit for standard orders:** This limit is applicable only to standard orders. The orders which carry the "recoverability flag" are marked as standard orders by T7. The activation of the recoverability flag for an order allows retrieval of the complete history of the order in the trading system. Such orders are called standard orders. Their opposites are lean orders which allow a higher throughput and reduce latency. The latter consume less system resources. Therefore, the use of lean orders over the use of standard orders is preferable in case of sending thousands of orders per product.

Further information is available in the Eurex Enhanced Trading Interface Manual which is available on the Eurex website <https://www.eurex.com>:

Support > Initiatives & Releases > T7 Release 10.0 > Trading Interfaces

- **Transactions without market data update:** This limit is applicable to transactions which reach the matching engines, but either have no market data impact (i.e. failed IOC orders) or are order modifications which result in an order deletion without a contract being traded (such transactions are for example the modification of a resting order into an aggressive Book or Cancel order, which will lead to a deletion of the resting order).
- **Transaction limit for all transactions:** The term "all transactions" describes every message that reaches the matching engine of T7. These include standard orders and non-standard orders, quotes, and inquiries. Messages that are rejected at the gateway are excluded.

Generally, "standard orders" as well as "transactions without market data update" are a subset of "all transactions". The relationship is shown in Figure 1.

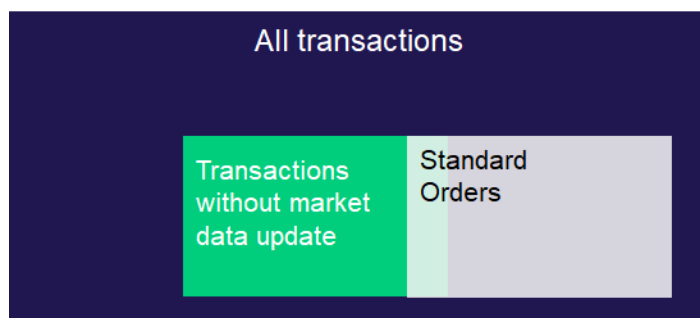

Figure 1 : Relationship between standard orders, transactions without an orderbook update and all transactions

¹ In the following, we refer to these transactions as "transactions without market data update".

Every day, for each Participant, the actual transactions are counted per product. If this transaction count exceeds the predefined transaction limit, then such instance is considered as a violation of the limit.

There are two types of violations:

- **Accidental violation:** A violation of the limit is considered “accidental” if a limit is exceeded less than four times for a product in a calendar month. Accidental violations are not subject to the ESU Fee.
- **Systematic violation:** A violation of the limit is considered “systematic” if a limit is exceeded more than three times for a product in a calendar month. Systematic violations are subject to the ESU Fee. Thus, the ESU Fee is not only applied from the fourth violation onwards, but also applies to all the earlier violations in that particular month.

It is important to note that violations are counted per product across the three limit types. Suppose there were two violations in the limit type “all transactions” and two violations in the limit type “standard orders” in the product DAX® Futures (FDAX) in a particular month. This is considered as a systematic violation. The ESU Fee is calculated for the four violations separately and the total fee for that Participant will be the sum of the individual ESU Fees for each transaction limit. Please note, in case there are violations against multiple limit types in a product on a day, it will be counted as one violation.

The ESU Fee is calculated using Equation 1.

$$\text{ESU Fee} = \left[\text{Transaction count} - \text{Transaction limit} \right] \times \text{Fee (€)}$$

Equation 1 : Total ESU Fee

A transaction is defined as a system message that reaches the matching engine and yields a response. A transaction can be identified by inspecting the system response. If the response contains a time stamp from the matching engine the message is added to the daily transaction count of the Participant for the respective product.

Technically, the time stamp from the matching engine can be found in the structure ResponseHeaderME or NRResponseHeaderME in the field TrdRegTSTTimeIn. Table 6 in the appendix provides technical examples of transactions.

An order, a quote and a mass quote; each of these is counted separately as one transaction.

2.1.1 General remarks

Minimum Quotation Requirements

The Minimum Quotation Requirements reflect the parameters from the commercial Liquidity Provider schemes. The parameters are defined along the three dimensions of the commercial schemes:

1. Spread requirements (e.g. 10% of the bid price, or 2 ticks)
2. Size requirement (e.g. 10 lots)

3. Time requirement (e.g. 8.5 hours for 140 option strikes, or 8 hours for the front month futures contract)

However, there are some differences if the quotation requirements do not restrict on a specific instrument or a specific timeframe throughout the day.

In case there are multiple commercial Liquidity Provider Schemes in a product, the Minimum Quotation Requirements create a synthetic scheme for this particular product, along the weakest requirement within the three dimensions, e.g.:

1. The size requirement is from the scheme which requires the smallest size
2. The spread requirements are from the scheme with the widest spreads
3. The time requirement is from the scheme with the smallest required time

Eurex Exchange Minimum Quotation Requirements necessitate that a participant quotes at a high frequency for various instruments, which means that participants generate higher transaction counts compared to those participants that do not engage in quotation of products (even if a Participant barely fulfills the Minimum Quotation Requirements).

Therefore, in case the participant fulfills the Minimum Quotation Requirements, the limit needs to be raised to a much higher level. Eurex Exchange does not want to discourage participants from quoting more instruments than the required ones.

2.2 Transaction limit

Figure 2 provides an overview of the different factors that affect the calculation of a transaction limit. The transaction limit consists of two components: (i) volume component and (ii) floor.

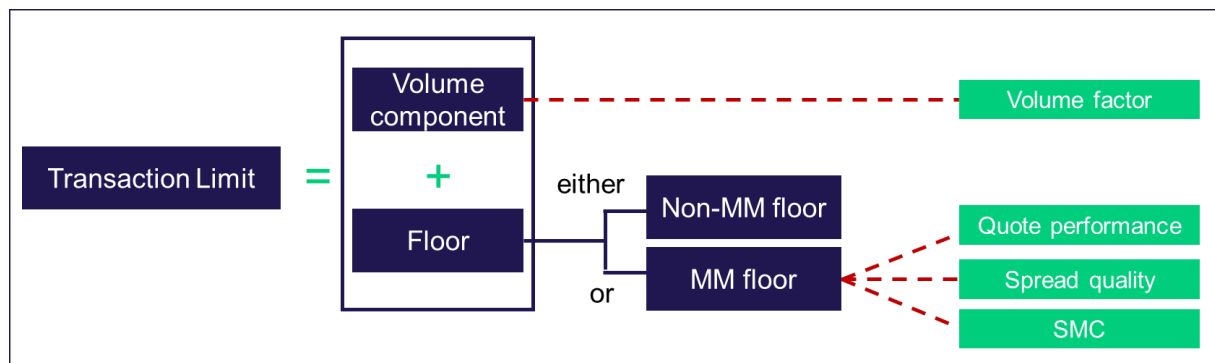

Figure 2 : Overview of factors affecting the transaction limit used for the ESU Fee

Please note: The term Market Maker in the context of the ESU Fee refers to Participants fulfilling the Minimum Quotation Requirements². A trading participant acting as liquidity provider who signed the Liquidity Provider Agreement and fulfilled the defined requirements of the so-called Stress Presence Building Block on a day with Stressed Market Conditions, is according to the General Supplement of the Liquidity Provider Agreement, eligible for an increased Market Maker base by 10% on that day. For all rights and duties of the liquidity provider, the provisions of the Liquidity Provider Agreement apply.

² See definition in 2.1.1

2.2.1 Volume component

The volume component is proportional to the traded order book volume. A volume component is calculated by multiplying the order book volume by the predefined volume factor. A higher order book volume increases the volume component. The bigger the volume component, the higher the transactions limit. A typical value of a volume factor for “all transactions” is 50.

Example: Suppose the following factors on a particular day for a particular product

- Order book volume generated by a Participant = 2,000 and
- Volume factor = 50

This results in

$$\begin{aligned} \text{Volume Component} &= \text{Order Book Volume} \times \text{Volume Factor} \\ \text{Volume Component} &= 2,000 \times 50 = 100,000 \end{aligned}$$

2.2.2 Floor

As shown in Figure 2, there are two types of floor components.

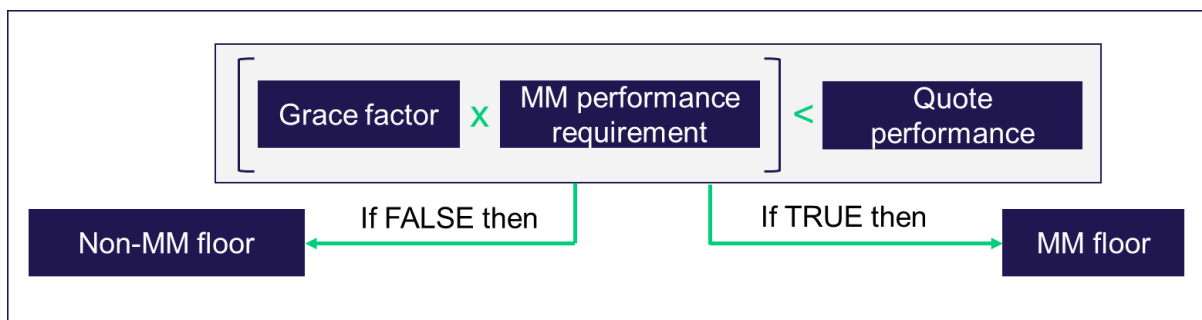

- **Non-Market Maker floor (Non-MM floor):**

For each Participant per day, per product and for each type of a transaction limit, a minimum floor is set regardless of any traded volume in the order book. The values for the Non-Market Maker floor are predefined depending on the product.

- **Market Maker floor (MM floor):**

This component is used in case of products where Market-Making is applicable (i.e. the Minimum Quotation Requirements are defined) and for the Market Makers that satisfy the condition shown in Equation 2. The grace factor allows Market Maker with a quote performance lower than the quote performance of the Market Maker performance requirement to be eligible for the Market Maker floor. Equation 3 shows the formula to calculate the Market Maker floor.

Foremost, it is necessary to decide whether the MM floor is applicable. This decision is taken by checking whether the Market Maker meets the condition under consideration related to the quote performance described by Equation 2.

Equation 2 : Decision whether MM floor is applicable

The quote performance takes into consideration that different products (e.g. ALV or OESX) have different Market Maker performance requirements.

Example: Suppose for a certain product:

- Grace factor = 0.25
- Market Maker (MM) performance requirement = 0.85
- Quote performance of Market Maker A (QP_A) = 0.70
- Quote performance of Market Maker B (QP_B) = 0.20

Calculation:

Grace factor \times *MM performance requirement for the given product* = $0.25 \times 0.85 = \mathbf{0.2125}$

Therefore:

Since 0.2125 is less than 0.70 (QP_A) \rightarrow MM floor will be applicable for Market Maker A

Since 0.2125 is greater than 0.20 (QP_B) \rightarrow Non-MM floor will be applicable for Market Maker B

The next step is to understand the calculation of MM floor. Equation 3 shows the formula to calculate the Market Maker floor.

$$\text{MM floor} = \text{maximum} \left[\text{Non-MM floor}, \text{MQ base}_{SQ} \times \text{Quote performance} \right]$$

Equation 3 : Calculation of the MM floor component for ESU Fee

The following text describes various factors shown in Equation 3.

- **Quote performance (QP):**

The quote performance is the ratio of "covered time" to "required time".

- Covered time: This is the total time in all possible instruments even beyond the strike price window of a product the participant actually quotes in a day. To calculate the covered time, only those quotes that satisfy the constraints regarding the maximum spread and minimum quote size are considered. The "covered time" used in this context is the sum of all-time intervals across all outright instruments in a given product where a participant has quoted according to the Minimum Quotation Requirements.
- Required time: This is the total time in all possible series of the strike price window of a product the participant could quote in a day. A typical example is 7 strikes per expiration for 6 expirations for both put and call for time per day, yields to required time = $7 \times 6 \times 2 \times 8.5$ hours = 714 hours. Please note the time per day will be replaced with the actual time for which the instruments were in continuous trading (i.e. removing the auctions, or in case of a system crash reducing the time)

The covered time is then set in relation to the required time of those outright instruments (i.e. an option strike) which need to be quoted to fulfil the Minimum Quotation Requirements. Therefore, the maximum quote performance is the relation of the number of outright instruments that have been listed in the entire product and the number of outright instruments that need to be quoted by participants. Please note, quotation activity in complex instruments is currently not considered.

For example, a participant is required to quote seven strikes (out of possible 15 in strike price window) to receive up to 100 percent (= 1.0) Market Maker performance (regarding the Minimum Quotation Requirements). If the participant quotes 15 series, then this performance goes up to 214 percent (= 2.14). Thus, the quote performance is directly proportional to the amount of instruments a participant quotes. Another example: A participant is required to quote one futures expiration for 8.5 hours and he decides to quote this expiration for 20 hours. Hence, his quote performance will be 20 hours/8.5 hours = 2.35. The larger the number of instruments, the higher is the value of the quote performance.

- **Spread quality (SQ):**

The spread quality is a performance measure based on the average spread in relation to the required spread calculated for all outright instruments quoted by a participant in a product for a day. The spread quality is applicable only to those quotes, which satisfy the constraints regarding the maximum spread and the minimum quote size as defined by the Minimum Quotation Requirements. It is calculated using the following formula on a tick by tick basis for each instrument and aggregated per day using time weighted averages,

$$SQ = \begin{cases} \frac{Max\ Spread\ Allowed - Quoted\ Spread}{Max\ Spread\ Allowed - Tick\ Size}, & \text{if } Max\ Spread\ Allowed > Tick\ Size \\ 1, & \text{if } Max\ Spread\ Allowed = Tick\ Size \end{cases}$$

The rationale for this factor is that if the bid-offer spread becomes tighter, then more quote updates are required to reflect the changes in the market price. Depending on the spread quality, values of the MQ base factor change. Table 2 shows example values for MQ base factor per spread quality (SQ).

SQ	MQ base
SQ ≤ 0.2	250,000
0.2 < SQ ≤ 0.3	500,000
0.3 < SQ ≤ 0.4	750,000
0.4 < SQ	1,000,000

Table 2 : MQ base factor and spread quality for the ESU Fee

3. Parameters

3.1 Limit parameters

This section contains the values of the limit parameters per product type. The limit is defined based on the product type of the product. The product types are published in the product overview section on the Eurex website <https://www.eurex.com>:

Markets > Product Overview > Complete list of all Eurex products in csv format

The following parameters are used to calculate the ESU Fee:

Product group*	Product Type	Grace Factor	All transactions				Standard orders				Transactions w/o market data impact and order modifications which lead to an order cancellation			
			Volume Factor	Non-MM Floor	Spread Quality	MQ Base	Volume Factor	Non-MM Floor	Spread Quality	MQ Base	Volume Factor	Non-MM Floor	Spread Quality	MQ Base

* Note: The table contains the main product group per product type and the list of product group names is not exhaustive.

Table 3 : Per product group, per transaction limit type, MM base values and spread quality as well as volume factor for the ESU Fee

A trading participant, acting as liquidity provider and fulfilling the defined requirements of the so-called Stress Presence Building Block on a day with Stressed Market Conditions, is eligible for an increased MM base by 10% on that day (c.f. section 2.2).

3.2 Fee parameters

This section includes the fee parameters that will be used to calculate the ESU Fee. The fee structure to calculate the ESU Fee is shown in Table 4. It is important to note that the sliding scale of the range

mentioned in Table 4 is applied to the transactions which are in excess of the transaction limit. The percentage values in the range are relative to the individual transaction limit. It is worth to recollect the fact that transaction limits are predefined per Participant, per product and per day.

ESU Fee per exceeded transaction	With a violation of the transaction limit by
EUR 0.05	Up to 50%
EUR 0.10	50% - 100%
EUR 0.25	> 100%

Table 4 : ESU Fee structure

4. Sample calculation of the Excessive System Usage Fee

The following example explains the calculation of the ESU Fee.

Observed Data:

For a particular product, for a registered liquidity provider, for a particular day

- Total number of transactions = 900,000
- Order book volume = 1,000
- Quote performance = 0.30
- Spread quality = 0.45
- Fulfilled the Minimum Quotation Requirements during Stressed Market Conditions

Predefined parameters for the same product are:

- Volume factor = 50
- Non-MM floor = 250,000
- Grace factor = 0.25
- MM performance requirement = 0.85

Calculations:

- Calculation to check whether MM floor is applicable (Equation 2):
 $Grace\ factor \times MM\ performance\ requirement = 0.25 \times 0.85 = 0.2125$
 0.2125 is less than the observed quote performance (= 0.30)
 → MM floor is applicable in this case
- Calculation of volume component:
 $Volume\ component = Order\ book\ volume \times Volume\ factor$
 $Volume\ component = 1,000 \times 50 = 50,000$
- Calculation of MM floor (Table 2):
 For the spread quality value of 0.45, the corresponding value of the MQ base = 1,000,000.
 As the participant fulfilled the Minimum Quotation Requirements during Stressed Market Conditions the MQ base will be increased by 10%, therefore, MQ base = 1,100,000.
 Equation 3 shows the formula to calculate the MM floor.
 $MM\ floor$
 $= maximum (Non\ Market\ Maker\ floor, (Market\ Maker\ base \times Quote\ performance))$
 $= maximum (250,000, [1,100,000 * 0.30]) = maximum (250,000, 330,000)$
 $= 330,000$
- Calculation of transaction limit:
 Based on Figure 2,
 $Transaction\ limit = Volume\ component + Market\ Maker\ floor$
 $Transaction\ limit = 50,000 + 330,000$
 $Transaction\ limit = 380,000$
- Calculation of the ESU Fee:
 Number of transactions exceeding the limit = $900,000 - 380,000 = 520,000$.
 Apply the fee structure from Table 4 to these transactions exceeding the limit. The calculations for that are shown in Table 5.

With a violation of the transaction limit by	ESU Fee per transaction	Number of transactions in the corresponding range	Fee (EUR)
Up to 50%	€ 0.05	$380,000 * 50\% = 190,000$	9,500
50% to 100% of transaction limit	€ 0.10	$380,000 * 50\% = 190,000$	19,000
> 100% of transaction limit	€ 0.25	$(520,000 - 190,000 - 190,000) = 140,000$	35,000
Total ESU Fee:			63,500

Table 5 : Sample ESU Fee calculation

5. Customer reports

Five reports will be made available on a daily* basis:

- TR102 Excessive System Usage Report
- CB069 Transaction Report
- TD954 Stressed Market Conditions
- TR104 Eurex Daily ESU Parameter
- TR105 Minimum Quotation Requirements

These reports are available for the Participants via the Common Report Engine. The Participants themselves have to query these reports from the Common Report Engine. Every day, the report for the previous trading day is available. The CRE stores the reports for the last 10 trading days.

* Additionally, intraday versions of the report CB069 are available five times a day.

5.1 TR102 Excessive System Usage Report

- The report is generated on a daily basis
- This report contains the data per product per limit type for each elapsed trading day of the month
- The report provides information on the transaction limit, actual transaction count; If the limit is exceeded, then violation count along with the excess transactions are shown
- The value in the column 'headroom': indicates the distance from the limit
 - $0.0 \leq \text{Headroom} \leq 1.0$
 - $\text{Headroom} = [1.0 - (\text{transaction count} / \text{transaction limit})]$
 - If the number gets closer to 0, then it would be a matter of concern
- The values in the column 'feeEUR' indicate the ESU Fee in Euro; The purpose of this column is to show the ESU Fee for all violations that will have to be paid by a Participant in case the limit violation turns out to be a systematic one

5.2 CB069 Transaction Report

- If the values from TR102 for a particular product are observed to be so high that deeper investigation is necessary, then this report can be used to find out the further information at session ID level and/or trader ID level
- Intraday versions of this report are made available five times a day and can be used by the Participants to track, for the respective trading day, number of transactions, ordered volume and traded volume – per product, per limit type, per session ID and per trader ID; The report data will provide an aggregate of the current trading day
- The intraday reports are available via CRE and will have the following name convention: 90RPTCB069EUREXYYYYMMDDHHMM
- The schedule of the availability of the intraday reports is shown in the following table:

Report data		Report availability
from	to	
Start of trading	04:00 CET	5:30 CET
	07:00 CET	8:30 CET
	10:00 CET	11:30 CET
	14:00 CET	15:30 CET
	18:00 CET	19:30 CET

Please note that the intraday report available at 19:30 CET will not be the final extract for the day; The final report will be made available on the following day

- The intraday reports are available in the following formats: .csv and .xml.
- The number of orders and the ordered volume are shown in the columns 'Orders Count' and 'Ordered Volume'. The number of trades and the traded volume values are shown in the columns 'Trades Count' and 'Traded Volume' respectively.
- For the limit type 'Standard', the values of traded volume and ordered volume are not measured separately. "n/a" stands for not available.

The CB069 report consists of three parts:

- 1 The first part provides the information on number of transactions, number of orders, ordered volume, number of trades and traded volume per product per limit type.
- 2 The second part provides additional granularity of session ID level to the information from the first part. The column 'Session' contains session IDs.
- 3 The third part provides additional granularity of trader ID level to the information from the first part. The column 'User' lists trader IDs.

Figure 3 : Structure of the daily CB069 report

5.3 TD954 Stressed Market Conditions

- The report is generated on a daily basis
- This report contains the data per product for each elapsed trading day of the month
- The report provides information of the fulfilment of the Minimum Quotation Requirement during Stressed Market Conditions for all trading days in the current month and the fulfilment month-to-date

5.4 TR104 Eurex Daily ESU Parameter

- The report is generated on a daily basis
- This report contains the parameters per product and limit type

- It contains the daily data per product for all the elapsed trading days.
- The intraday reports are available via CRE and will have the following name convention: 90RPTTR104PUBLIYYYYMMDD
- The column 'limType' shows the type of the transaction limit (A = Transaction limit for all transactions, N = Transactions without market data update, S = Transaction limit for standard orders)
- The column 'graceFactor' shows the grace factor
- The columns 'floor' and 'volFactor' show the base limit volume and count
- As the name indicates, the column 'smcFactor' shows the stressed market factor for the OTR calculation

5.5 TR105 Minimum Quotation Requirements

- The report is generated on a daily basis
- This report contains the Minimum Quotation Requirements for each product (if applicable)
- It contains the daily data per product for all the elapsed trading days
- The intraday reports are available via CRE and will have the following name convention: 90RPTTR105PUBLIYYYYMMDD
- The columns 'MinQuoteSize' and 'minQuoteSizeSMC' show the minimum quote size during normal and Stressed Market Conditions

Detailed information on the structure of all the reports is available on the Eurex website www.eurex.com:

Support > Initiatives > T7 Releases > Choose the current T7 Release > System Documentation > Under “Reports” you will find the “T7 XML Report Reference Manual” for the respective release

Details and manuals on further T7 Releases can be found [here](#).

6. Billing

Eurex Exchange will generate a monthly invoice per Participant containing all systematic violations.

All Participants will receive the report CB197 containing the detailed information on the ESU Fee by the end of each month. The following diagram shows the structure of this report.

Figure 4 : Structure of the CB197 report (excess transaction limit fees)

The column name “LT” is an abbreviation for “limit type”. Three types of transaction limits are defined, namely, “all transactions”, “standard orders” and “transactions without market data update”. The possible values in column “LT” will be either “A”, “S” or “N”. The letter “A” belongs to the transaction limit type for “all transactions”. The letter “S” denotes that the information in that row is related to the limit type “standard orders” and the letter “N” indicates that the information in the corresponding row is related to the limit type for “transactions without market data update”.

Detailed information on the structure of the report is available on the Eurex website www.eurex.com:

Clear > Support > Initiatives > C7 Releases > Choose the current C7 Release > System Documentation > Under “Reports” you will find the “Eurex Clearing XML Reports – Reference Manual” for the respective release

Details and manuals on further C7 Releases can be found [here](#).
