The company Inditex S.A. has announced the payment of a final bonus dividend of EUR 0.35 per share with an ex-dividend date 29 October 2021.

The payment of the bonus dividend will result in an adjustment of the above-mentioned contracts.

More information about the dividend payments is available on the company`s website under www.inditex.com

Procedure

R-Factor Method

Determination of adjustment factor (R-factor)

S1	Closing auction price of the Inditex S.A. share
S2	S1 minus bonus dividend
R-Factor	$S2 / S1$

Options

Adjustment of strike prices and contract sizes

- All existing strike prices will be multiplied by the R-factor.
- The contracts size will be divided by the R-factor.
- The version number of the existing series will be increased by one.
Immediately after close of trading on the last cum trading day, adjusted strike prices and contract sizes will be published on www.eurex.com in section **Rules & Regs > Corporate actions > Corporate action information**
- New series with standard contract size 100 and version number 0 will be introduced effective the ex-date.
- All existing orders and quotes will be deleted after close of trading on the last cum trading day. The adjustment also refers to existing positions in TES flexible options.

Exercises

- Upon exercise of an adjusted series cash settlement will be made for the fractional part of the new contract size.
- For exercise of adjusted series as of version 2, differences may occur in the delivery process. In report RPTTA111 (All Active/All Inactive Series), the parts of the contract size are listed for which cash settlement will take place in case of exercise of an adjusted series.

Futures

1. Adjustment of contract size and variation margin

- The adjustment is done via the same R-factor as for the options
- To adjust the calculation of the variation margin of the following exchange trading day, settlement prices of the last cum trading day will be multiplied by the R-Factor.
- The new contract size will be calculated as follows:
 $\text{Contract size new} = \text{contract size old} / \text{R-factor}$
- All outstanding orders and quotes will be deleted after close of trading on the last cum trading day.
- The adjustment also refers to existing positions in TES flexible futures.

2. Introduction of a new contract

- A new single stock futures contract with standard contract size 100, a new stock tracking futures contract with standard contract size 100 and a new futures contract on dividends with standard contract size 1000 will be introduced.
- The exact introduction date will be published via a circular.

- As soon as the new contract is available for trading and there are no more contract months with open interest in the original contract, trading in this contract will be put on "HALT" and finally discontinued.
- Furthermore, no new contract months will be introduced in the original contracts 1IXD, IXDH, IXDI, IXDR, I2XD, I3XD, I4XD, I8XD and I9XD.

If there is no open interest on the last cum trading day after close of trading in one of the original contracts 1IXD, IXDH, IXDI, IXDR, I2XD, I3XD, I4XD, I8XD and I9XD, no adjustment will be made for these contracts and no new contract will be introduced to replace this.
