

T7 Release 15.0 – Focus Call Q&A

This document consolidates the questions, detailed answers, and technical clarifications discussed during the T7 Release 15.0 - Focus Call Q&A session. It covers schedule activation rules, market data interfaces (EOBI/EMDI), and risk control role permissions across the Admin GUI and ETI.

T7 Release 15.0 – Focus Call Q&A

Release Schedule & Feature Activation

Q: *As of which date will the newly described features and changes go live?*

A: Activation timing follows standard deployment principles, with exceptions tracked on the initiatives portal:

- **Standard Activation:** In most cases, unless explicitly noted otherwise in the release documentation or focus presentations, changes go live simultaneously with the start of simulation or production.
- **Post-Release Tracking:** For enhancements that do not launch immediately upon general production rollout, a dedicated living table is maintained on the T7 / Eurex Initiatives website directly beneath the timeline.
- **Participant Notifications:** Official circulars will be issued in advance to notify market participants well ahead of any specific post-release activation dates.

Market Data Interfaces (EOBI & EMDI)

Q: *Which changes are expected for the EOBI and EMDI market data interfaces?*

A: Detailed interface modifications and schema updates are documented in the respective interface specifications:

- **Interface Documentation:** Specific message and field modifications are documented in detail within the dedicated Change Logs of two primary manuals: the Market and Reference Data Interface Manual (EMDI) and the Extended Order Book Interface Manual (EOBI).
- **Availability:** Both documents are published on the T7 Initiatives page. Market participants are advised to inspect the change logs directly for structural and protocol details.
- **Support:** Technical Key Account Managers (TKAM) and Key Account Managers (KAM) are available to assist with specific integration requirements.

Risk Controls, User Roles & ETI Interface

Q: Does the new Two-Eyes Principle role to stop users impact which ETI requests can be sent by which role (specifically regarding the Trading Action request)?

A: The Two-Eyes Principle role and the ETI Trading Action request operate under separate governance channels:

- **Admin GUI vs. ETI Separation:** The new Two-Eyes Principle role is introduced exclusively for manual administrative stop actions performed via the Admin GUI.
- **Programmatic ETI Role:** Executing the Trading Action request over ETI (utilized for stop trading / kill switch functionality) specifically requires the QBU Trading role.
- **Role Assignment:** The QBU Trading role is a dedicated entitlement that can be granted to designated traders with elevated privileges or to service administrators.
- **Immediate Execution:** Any authorized user holding the QBU Trading role can directly initiate stop requests for Sponsored Access units via ETI without triggering a Four-Eyes approval requirement.

General Support & Follow-Up

Q: Where can participants find unresolved questions or obtain further bilateral support?

A: Participants can access post-session materials or contact DBAG client services directly:

- **Consolidated Q&A Document:** Questions that could not be addressed live during the session will be compiled into an official Q&A document uploaded to the T7 Initiatives page within the coming days.
- **Direct Inquiries:** Participants may reach out to their Key Account Manager or submit questions directly to client.services@deutsche-boerse.com.
